Source: Insight Investment and Rimes. All performance is annualised. Fund performance is shown for share class $S \in Acc$ and is calculated as total return, including reinvested income, gross of fees and expenses. Benchmark performance shown is for 1-month ESTER (previously 3-Month EURIBOR until 1st January 2020). Benchmark used is the share class currency equivalent of SONIA. Gross of fees performance results do not reflect the deduction of charges, which will reduce investors' returns. Performance for periods over one year is annualised. Past performance is not a guide to future performance. The value of investments and any income from them will fluctuate and is not guaranteed (this may be partly due to exchange rate fluctuations). Investors may not get back the full amount invested.

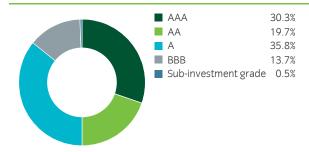

FUND MANAGER COMMENTS

The Fund outperformed its cash benchmark in September, ending with a weighted average rating of single A+. Risk assets sold off due to rising bond yields, elevated oil prices and the likelihood of rates remaining higher for longer. European structured credit was mixed, with performance primarily driven by carry. Higher beta asset classes, including collateralised loan obligations (CLOs), showed signs of a modest reversal in performance. Weaker credits exposed to rising interest rates saw an uptick in delinquencies. Issuance was robust across sectors and jurisdictions. Spreads widened within US structured credit, against weakened technicals. New issuance surged to surpass levels from last year and was easily absorbed by investors. Delinquencies and losses edged higher across the consumer credit landscape. Performance was driven by carry. The fund deployed capital into UK residential mortgage-backed securities and single-A CLOs.
